CONDITIONS:

Kits content specifications may change depending on product availability. Items subject to change without notice.

Please note that record settings such as frame rate, image quality settings, bit rates and various environmental factors can affect the resulting record time attained for the above storage quoted. This is due to degree of motion encountered, the amount and size of objects moving in the camera's field of view, and the variation of colours and other factors. The above storage amount should be viewed as an approximate recommendation and actual results may vary. Important things to specify is frame rate, record resolution, type of recording and record time period. When quoting on motion detection, clearly state what your assumption is in actual record time per day.
